

Little Bit Helps!

Turning the tap off while brushing teeth or washing hands saves about 5 litres of water a minute.

A 5-minute shower instead of a 10-minute one saves 47.3 litres of water with an energy-efficient showerhead.

Fixing the worn washers in a tap with a slow steady drip saves 1325 litres of water per year.

Never pour chemicals down the drain or onto the grass. Ask your local council where to safely drop them off.

Never throw rubbish or chemicals onto the street, it will end up in our ocean and waterways.
